DETAILED ACTION

Response to Arguments

- 1. Applicant's arguments, see Remarks, filed May 19, 2005, with respect to the rejection(s)of claim(s) under 102 and 103 have been fully considered and are persuasive. Therefore, the rejections has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made for claim 19.
- 2. Claim 19 does not have a cold start injector or multipart injection during cold start. It just claims activating the spark igniters and retarding at least on spark igniter different from the others.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claim 19 is rejected under 35 U.S.C. 102(b) as being anticipated by Hoshiba et al. (US/5197430).
- 5. Hoshiba et al shows an engine in FIG. 6(a), wherein after the start of the engine
 15, the ignition timing is first advanced for a time period designated by "A" until the
 engine temperature reaches a predetermined value and is then controlled in multiple
 steps so as to gradually retard the timing until warm-up is completed. The time periods
 "A" and "B" during which the ignition timing is held at a constant spark advance are
 stored in memory 48 and are calculated on the basis of the temperature of the engine

Application/Control Number: 10/624,228 Page 3

Art Unit: 3747

15 when it is <u>started</u>, as illustrated in FIG. 6(b), and also in connection with a set of correlated temperature values predetermined by experimental results in the design and development of the system and preprogrammed in the memory 48 relating the temperature where the sensor 47 is located to the actual <u>engine</u> temperature at given time periods after the <u>engine</u> 15 is <u>started</u>. The memory 48 may be loaded with a number of sets of correlated temperature values for <u>different</u> sensor locations. Since the ignition timing is varied inherently the sparkplugs will have different retarding.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Arnold Castro whose telephone number is (571) 272-4839. The examiner can normally be reached on Mon, Tues, Wed, Thurs 9-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Yuen Henry can be reached on (571)-272-4856. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
